

Srivilliputhur Municipality: Remaining Real-Data Review

Final source-backed status for the remaining data requested. Prepared 16 September 2026. No synthetic values have been added.

Executive result

The requested remaining real datasets were checked. A government IMD/NWDP district-wise daily rainfall CSV resource was verified as available for download. A complete public 33-ward drain GIS inventory, real drain-condition observations, maintenance history, official ward-boundary GIS file, and verified street-to-ward GIS mapping were not found in the available public results.

A. DATA FOUND

Dataset	Data available	Records	Source / URL	Quality
District-wise daily rainfall	Downloadable CSV resource; contents must be inspected for Virudhunagar rows	Not inspected	NWDP / IMD: https://www.nwdp.nwic.gov.in/en/dataset/rainfall-daily-imd/resource/8752174f-1d17-4aaf-8058-2eb396f50157	OFFICIAL / GOVERNMENT
IMD rainfall time-series portal	District-wise and station-wise rainfall interfaces	Not stated	IMD: https://mausam.imd.gov.in/imd_latest/contents/rainfall_time_series.php	OFFICIAL / GOVERNMENT
Srivilliputhur ward-map page	Viewable municipal ward-map page; downloadable boundary file not verified	33 wards referenced	TN Urban Local Bodies: https://www.tnurbantree.tn.gov.in/srivilliputhur/ward-map/	OFFICIAL / GOVERNMENT
Storm-water drain tender record	Tender page for Srivilliputhur Municipality; BOQ may contain work quantities, but exact BOQ values were not exposed in the result	1 tender record	TN e-Procurement: https://tntenders.gov.in/	OFFICIAL / GOVERNMENT / TENDER
OSM road/map data	Road and mapped feature data can be queried or downloaded; not a verified municipal drain registry	Not established	OpenStreetMap: https://www.openstreetmap.org/	OSM

B. EXACTLY WHAT IS STILL MISSING

Missing dataset / field group	Status
Complete drain inventory for all 33 wards, including Drain_ID, ward, street, coordinates, type, length, width, and depth	NOT_PUBLICLY_AVAILABLE
Complete culvert inventory and dimensions	NOT_PUBLICLY_AVAILABLE
Official downloadable ward-boundary Shapefile, GeoJSON, or KML	NOT_PUBLICLY_AVAILABLE / NOT_VERIFIED
Verified street-to-ward GIS mapping	NOT_PUBLICLY_AVAILABLE
Confirmed multi-year Srivilliputhur station daily rainfall series	NOT_CONFIRMED; NWDP district CSV must be downloaded and inspected
Real drain blockage percentages, plastic accumulation, water levels, and condition ratings	NOT_PUBLICLY_AVAILABLE
Drain cleaning dates, waste removed, teams, and work-order history	NOT_PUBLICLY_AVAILABLE
Precise incident GPS/ward/drain linkage	PARTIAL / generally unavailable
Drain-level rainfall duration linked to observations	NOT_PUBLICLY_AVAILABLE

C. SOURCE QUALITY

IMD/NWDP rainfall resources: OFFICIAL / GOVERNMENT. Tamil Nadu Urban Local Bodies ward page: OFFICIAL / GOVERNMENT. Tamil Nadu e-Procurement tender portal: OFFICIAL / GOVERNMENT / TENDER. OpenStreetMap: OSM. News reports and sanitation studies already in the project files: SECONDARY or HISTORICAL_PUBLIC according to the documented source. The existing Layer 2 ML sheet remains SYNTHETIC_DEMO.

D. IMPLEMENTATION STATUS

Ready to begin implementation with a limitation. The existing public evidence plus the separate synthetic Layer 2 dataset is sufficient for data-dictionary completion, workbook validation, synthetic ML demonstration, and separate

real-data analysis. It is not sufficient to claim a complete municipal drain GIS system or real-world predictive accuracy.

Recommended immediate action: download and inspect the NWDP district-wise CSV. If Virudhunagar or Srivilliputhur rows are present, add them to the real-rainfall analysis only. Do not merge them into synthetic drain rows unless a defensible date, location, and observation linkage exists.

Methodology statement for the report

Public rainfall, flooding, drainage, and solid-waste information were analyzed separately as real-world evidence for Srivilliputhur Municipality. Because the public records do not provide sufficient linked drain-level observations, the ML demonstration uses clearly labeled synthetic drain-level features and labels. Its performance is illustrative and requires validation with real field observations before deployment.

Evidence note

The public SFD report documents blocked open drains, regular monsoon waterlogging, and maintenance problems, but it does not provide a complete quantitative drain-condition dataset. The municipal ward page confirms the existence of a ward-map page but does not, in the retrieved content, provide a downloadable GIS boundary file.
